

UVOX IS DESIGNED FOR:

ASSESSMENT PROFESSIONALS

looking for a cost effective system to create customized and branded assessment programs for their clients.

LARGE CORPORATIONS looking

to automate their assessment processes and integrate the results with their talent management systems.

TEST PUBLISHERS looking for

a secure, flexible and robust technology platform to deploy their content.

POWER YOUR ASSESSMENTS WITH

Product Description

uVox is a cloud-based assessment delivery platform that helps organizations assess employees and candidates more efficiently.

uVox is content-neutral — **uVox** is an open platform that can integrate commercially available tests from any vendor as well as your own in-house content and instruments such as in-baskets, interview questionnaires, 360 feedback surveys etc.

Create customized assessment packages for the specific requirements of your project. Configure rules to manage candidate exemptions, branching, hurdles etc. Design and use project-specific, competencies-based expert reports that integrate data from different tests.

uVox is candidate centric — The candidate has a single login and completes all the tests in a single, branded environment. There is only one candidate registration, one notification and one assessment report, regardless of the number of tests used in the assessment package. This approach results in a better candidate experience and a much easier process to manage and support.

Flexible process automation — Business rules and a workflow module give you all the flexibility you need to model and automate your process as required.

Deploy anywhere — On the candidate's side, **uVox** offers a highly secure environment that uses only standard web technologies with low minimum requirements. **uVox** works on all the popular browsers (including on IOS and Android tablets) and does not require installing extensions. This makes it easy to implement remote assessment programs when appropriate.

About Ullix

Since 2005 **Ullix** has worked with organizations that need to evaluate large volumes of candidates, to develop solutions that help these organizations manage their assessments more efficiently. **Ullix** has developed **uVox**, a cloud-based, content-neutral and highly configurable software platform that can automate practically any assessment process.

POWER YOUR ASSESSMENTS WITH

Product Description (cont'd)

uVox offers a rich administration application

- Administrators can register candidates, schedule test sessions, notify candidates and manage the participation life cycle.
- Content managers can maintain content data such as tests, norms, protocols; they can extract data for item analysis etc.
- Management users can extract any type of report such as usage and billing reports.
- Psychologists can view candidate results, generate detailed participation reports, access and annotate candidate files, etc.
- As a system owner, you can create client accounts with appropriate data and functionality restrictions so that your clients can manage their testing autonomously but under your control.

Easy integration — Through its API, **uVox** can be integrated with applicant tracking system or HRIS so that candidates are automatically registered and tests are automatically assigned based on any criteria you choose. Once the assessment is complete, results can be automatically sent to your talent management system.

uVox Testing is secure — At the candidate level, mechanisms such as double authentication, parallel forms, item randomization and tight control of the candidate's environment ensure the protection of your content. At the application level, a role-based access privileges system ensures absolute control over what data and functionality all users can access.

uVox is proven — Millions of assessments have been successfully completed in **uVox**.
